

# Falls der Mirror vom ARCH nicht funktioniert

Ich hatte das Problem, das der Update Prozesse nicht funktionierte.

```
# pacman -Syu
```

```
I just discovered the problem though. The Australian mirror is broken. If I comment out m
au.mirror.archlinuxarm.org and use another one (I used the US/California one) then ever
pacman -Syu also updated core/extral/community after switching to the US mirror (had it
the AU mirror, half the time it would work), so looks like the Australian mirror is somehow
...not sure who to report that to.

Welcome to Pi-KVM - Open Source IP-KVM based on Raspberry Pi

The root filesystem of Pi-KVM is mounted in read-only mode by default.
Use command "rw" to remount it in the RW-mode and "ro" to switch it back.

To prevent kernel messages from printing to the terminal use "dmesg -n 1".
Sorry about that, it's been fixed up now. Server had been rebooted by the provider and w
To change KVM password use command "kvmd-htpasswd set admin".

error: failed to synchronize all databases
root@pikvm ~]#
```

Schuld war ein per default eingetragener Mirror von ARCH linux.

Original in der /etc/pacman.d/mirrorlist ⇒ Server = [http://de3.mirror.archlinuxarm.org/\\$arch/\\$repo](http://de3.mirror.archlinuxarm.org/$arch/$repo)  
die Ziffer 3 durch z.B. 5 austauschen.

Server = [http://de5.mirror.archlinuxarm.org/\\$arch/\\$repo](http://de5.mirror.archlinuxarm.org/$arch/$repo)

danach noch einmal das Update auslösen

```
rw
pacman -Syu
reboot
```
